

HANDLING

INTERNAL HANDLING SYSTEM, AGV, ROBOTICS

Automha designs, manufactures and installs automatic transport solutions – systems of pure internal transport, or serving automatic warehouses – able to increase productivity, reduce operating and manpower costs.

The modules that form the transport lines by Automha are determined by motorized conveyor belts, chains, belts and tapes, and can integrate orthogonal transfers, transshipment shuttles, elevators or other specially designed machines. Every section can be integrated with stations that identify, weigh, control and align the products.
